GAME OF THE MONTH  
C+VG

**Bobby Bearing** lived happily in Technofear - a metallic world of the future. But one day Bobby's brothers and cousins, ignoring the warnings of their elders, ventured out into the forbidden zone called The Metaplanes, and were attacked and captured. So it's Bobby to the rescue!

"Bobby Bearing features great graphics, wierd sound and brilliant gameplay. I love this game, it's so playable."

**BOBBY BEARING**

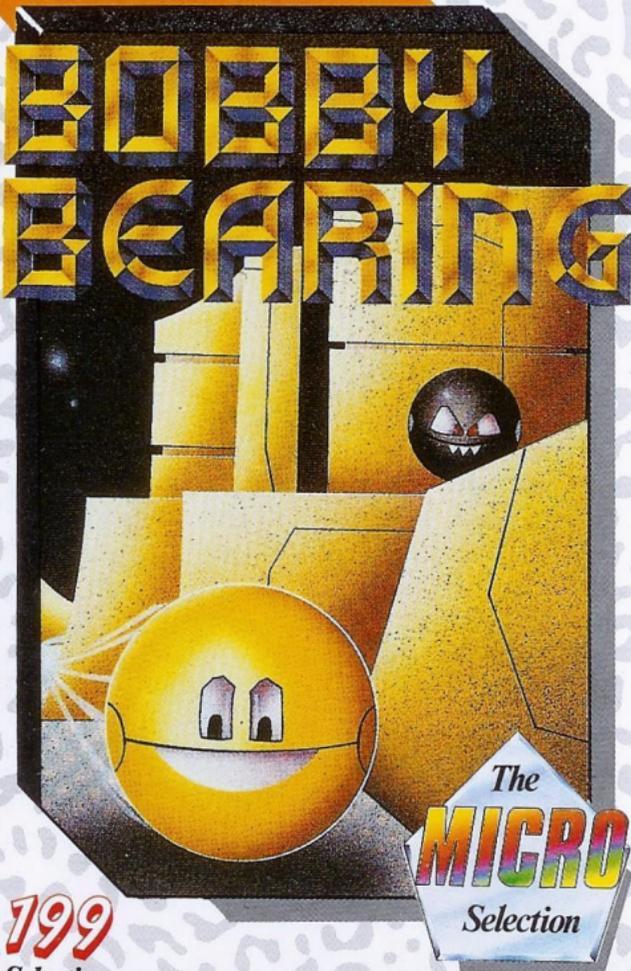

**Bobby Bearing** features "Curvispace 3D", giving an incredibly realistic rolling action over the many screens of hazardous terrain. Just negotiating these metallic highways would be difficult enough - but they are full of hazards like magnets, air ducts, and lifts - all controlled by hidden switches - and then there are the evil Black Bearings! And remember, getting through the Metaplanes is even more difficult when you're pushing your sick brother Bearing...

## BOBBY BEARING

### LOADING

Press CTRL and the small ENTER key

### THE GAME

Bobby and his family of bearings live in a metallic land of the future inhabited by many traps and fearful black bearings. Bobby's cousin has led his brothers astray in the land and it is up to Bobby to seek them all out and get them all home again. This was the first game to feature "Curvispace 3D" which actually allows the bearings to roll around in 3D space in a very realistic manner. You control Bobby, who emerges from his home and you aid him in his quest for his brothers and his cousin. Bobby has to find each of them in turn and roll them back home. But be careful! Getting past some of the pitfalls will be even more difficult when you are pushing another bearing!

### CONTROLS

Use keyboard or joystick. Keyboard controls are the Cursor keys or...

Top row Q onwards - UP RIGHT  
Middle row A onwards - DOWN LEFT  
Alternate keys along bottom row -  
UP LEFT/DOWN RIGHT

ESC - PAUSE

CTRL/DEL - RESTART

The keys 1-5 allow you to cheat - you lose points and if there is a brother in the room you lose him and so cannot fully complete the game.
