Hit CTRL/ENTER together then press PLAY and any key.

You are in a huge 64 storey automated industrial plant that is used for the production of deadly Confuzion bombs. This place is considered to be one of the greatest threats to mankind. Having gained access to the computer control room, your mission now is to explode every bomb on all of the factory's 64 levels.

The only information that you have is that there are 64 levels which consist of 8 sections each with 8 floors. These are arranged as:

Section 1 = Level 1 to 8, Section 2 = Level 9 to 16 and so on up to Section 8 = Level 57 to 64.

You have authorised access to the first level in each of the first six sections (1, 9, 17, 25, 33 and 41).

The assembly lines consist of sliding pallets which were used for the movement of components. The pallets are left covered in sections.

Move pallets into the adjacent space using the Up, Down, Left and Right controls to lay a fuse from the spark to the bombs. The spark will then burn along the fuse and detonate the bombs. All the bombs must be destroyed before the timer fuse at the bottom of the screen burns out. Running into dead ends, solid blocks or off the edge of a pallet will shorten the life of the spark.

In certain areas of the factory, the sprinkler system releases water droplets that will extinguish the spark on contact. You begin with 5 sparks. A bonus spark will be awarded every 4th level.

You have no information on bonus levels other than they occur at every 8th level. If you have difficulty controlling the pallets, try the REVERSE option.
